

Favouring Biodiversity in the Garden

All the bases, practical information, tips and advises

Synopsis:

The key to a healthy garden is biodiversity! To favour biodiversity is to change your garden into a lively space in which ecological balances naturally take place between the different inhabitants, plants or animals. Thus, the garden is protected from illnesses and undesirables.

Follow a few instructions and easily implement a few changes to transform your garden into a haven of peace for plants and animals. At this stage, you just have to enjoy!

Content:

Alternative solutions to chemical products for an healthy soil ; Hedges, flowered fields and salvage spaces: what plants should be kept and how to take care of them? ; Insects, our allies in the garden: how to recognize them and satisfy their needs?
