

# Insect Hotels & Hives

## *Cultivate biodiversity in your garden*

February 2018

### Synopsis:

To favour biodiversity in the garden is to transform it in a lively space and to recreate a natural ecological balance. Thus, our allies in the garden take care of positive missions: pollination, regulation, etc.

This book offers to readers portraits of the insects useful in the garden, so every gardener is able to identify them and know their benefits. The book also contains advises and instructions on how to install hives and insect hotels.

### Content:

- Nature in the garden: a necessity.
- The gardener's allies: portraits of the useful insects in the garden.
- How to satisfy your allies' needs? How to attract them?
- How to install insect hotels in your garden?
- How to install a hive in your garden?

### The Author:

**Sébastien Levret** is passionate about entomology since his childhood and grew up in a family experienced with ecological gardening. He is at the origin of the « entomologic gardening » concept, favouring insects and animals (such as birds) that are allies to gardeners.
